

Best new performer in the business

The all new, all hydraulic Cla-Val 98 Series Advanced Pressure Management Valve will steal the show with its stellar performance.

Designed to automatically reduce system pressure when demand is low, this valve will prevent pipe breaks without breaking the bank and limit background leakage without limiting the system's ability to respond to extreme demand, such as fire flow.

It does all this with a cutting edge hydraulic pilot system and no external devices such as meters, orifice plates or SCADA communication.
