

Product Announcement - FOR IMMEDIATE RELEASE

33 Series Electronic Pilot Controls

August 20, 2009 (Newport Beach CA) - Cla-Val, a leading manufacturer of automatic control valves for the waterworks industry, recently released the latest series in their line of advanced electronic products -- **33 Series Electronic Actuated Pilot Controls**. The series includes electronic versions of Cla-Val most popular hydraulic pilot controls:

- CRD-33 Pressure Reducing Pilot Control
- CRL-33 Pressure Relief Pilot Control
- CDHS-33 Rate of Flow Pilot Control

Designed and manufactured by Cla-Val, the submersible 33 Series Pilot Control maintains constant system pressure or flow rate with a set point that can be changed remotely. In the event of a power or signal failure, a valve equipped with the 33 Series Pilot continues to maintain accurate control, regardless of system fluctuations.

The 33 Series Pilot Control, which operates off 12VDC or 24VDC, is ideal for SCADA interface and can be operated using solar power. It can also be coupled with the all-new Cla-Val X143HP Hydro-Power Generator if autonomous valve site power is desired. It is available with any new Cla-Val control valve and can be field retrofitted to previously installed Cla-Val automatic control valves.

ABOUT CLA-VAL

Cla-Val is the leading manufacturer of automatic control valves, serving waterworks customers throughout the world. Founded in 1936, Cla-Val is a global company with headquarters and a 20-acre manufacturing complex in Costa Mesa, California, in addition to production facilities in Canada, Switzerland, France and the United Kingdom. With more than 400 employees in Costa Mesa alone, Cla-Val has long been the standard bearer in the industries they serve.
