

Purchase Specification

Model No. X101 VALVE POSITION INDICATOR

Function

The Valve Position Indicator assembly is designed to visually indicate the position quickly of Automatic Control Valves manufactured by Cla-Val Co.

Description

An indicator rod fastened directly to the main control valve stem moves up and down inside a Pyrex tube. The tube is contained within a housing which is open on two opposite sides to permit clear vision of the indicator rod. Standard materials in contact with operating fluid are brass, Pyrex and Buna-N.

An 1/8" pipe plug or a screw in the top of the housing serves as a vent to purge air that may be trapped in the valve cover. Each valve position indicator is furnished with the necessary adapter for installation on any size Cla-Val valve. The indicator assembly shall be leak proof and frictionless.
