

ON-LINE TRAINING

CVU CLA-VAL UNIVERSITY

ELECTRONIC CONTROL VALVES

Operation, Troubleshooting and Maintenance

Course Description: In this webinar we will discuss the operation of our electronic control valves. We will start with basic single solenoid control valves and how they operate within various hydraulic control valves. We will also discuss how we modulate our main valve by using 2 solenoids to maintain, flow, pressure and even level within your system. This will be a live and interactive webinar providing users the opportunity to ask questions throughout the presentation.

Open Q and A: This event will be dynamic and interactive using live survey and audience questions. Attendees will be able to receive **2 Contact Hours**.

Who should attend: Developed specifically for Waterworks System Operations, Maintenance personnel and Engineers. CVU is an excellent choice for individuals who are new to the industry or as a refresher on control valve operations. In these sessions we will be reviewing various valve operations, trouble shooting and maintenance of our main valve and control pilots.

Electronic literature will be e-mailed prior to class

Date: May 13, 2021

Time: 8:00 - 10:00am PST
