

VC-22D ValvApp™ Worksheet

This worksheet is intended for the configuration of ValvApps™ used in the VC-22D Valve Controller. From the information provided below, Cla-Val will determine whether a standard ValvApp™ should be used or if a custom ValvApp™ is required. Additionally, this worksheet acts as a check list during commissioning to verify all parameters have been correctly configured in the VC-22D Valve Controller. Once this worksheet is completed, please return to your Cla-Val representative for approval. If a custom ValvApp is required and approved, a custom wiring diagram and ValvApp™ will be created and emailed to you. Please verify all *Required fields have been filled out prior to submittal.

Information		Reset Form	Configuration: VC-22D
*Project Name	N/A	*Today's Date

	Additional Comments <input type="text"/>	

Communication

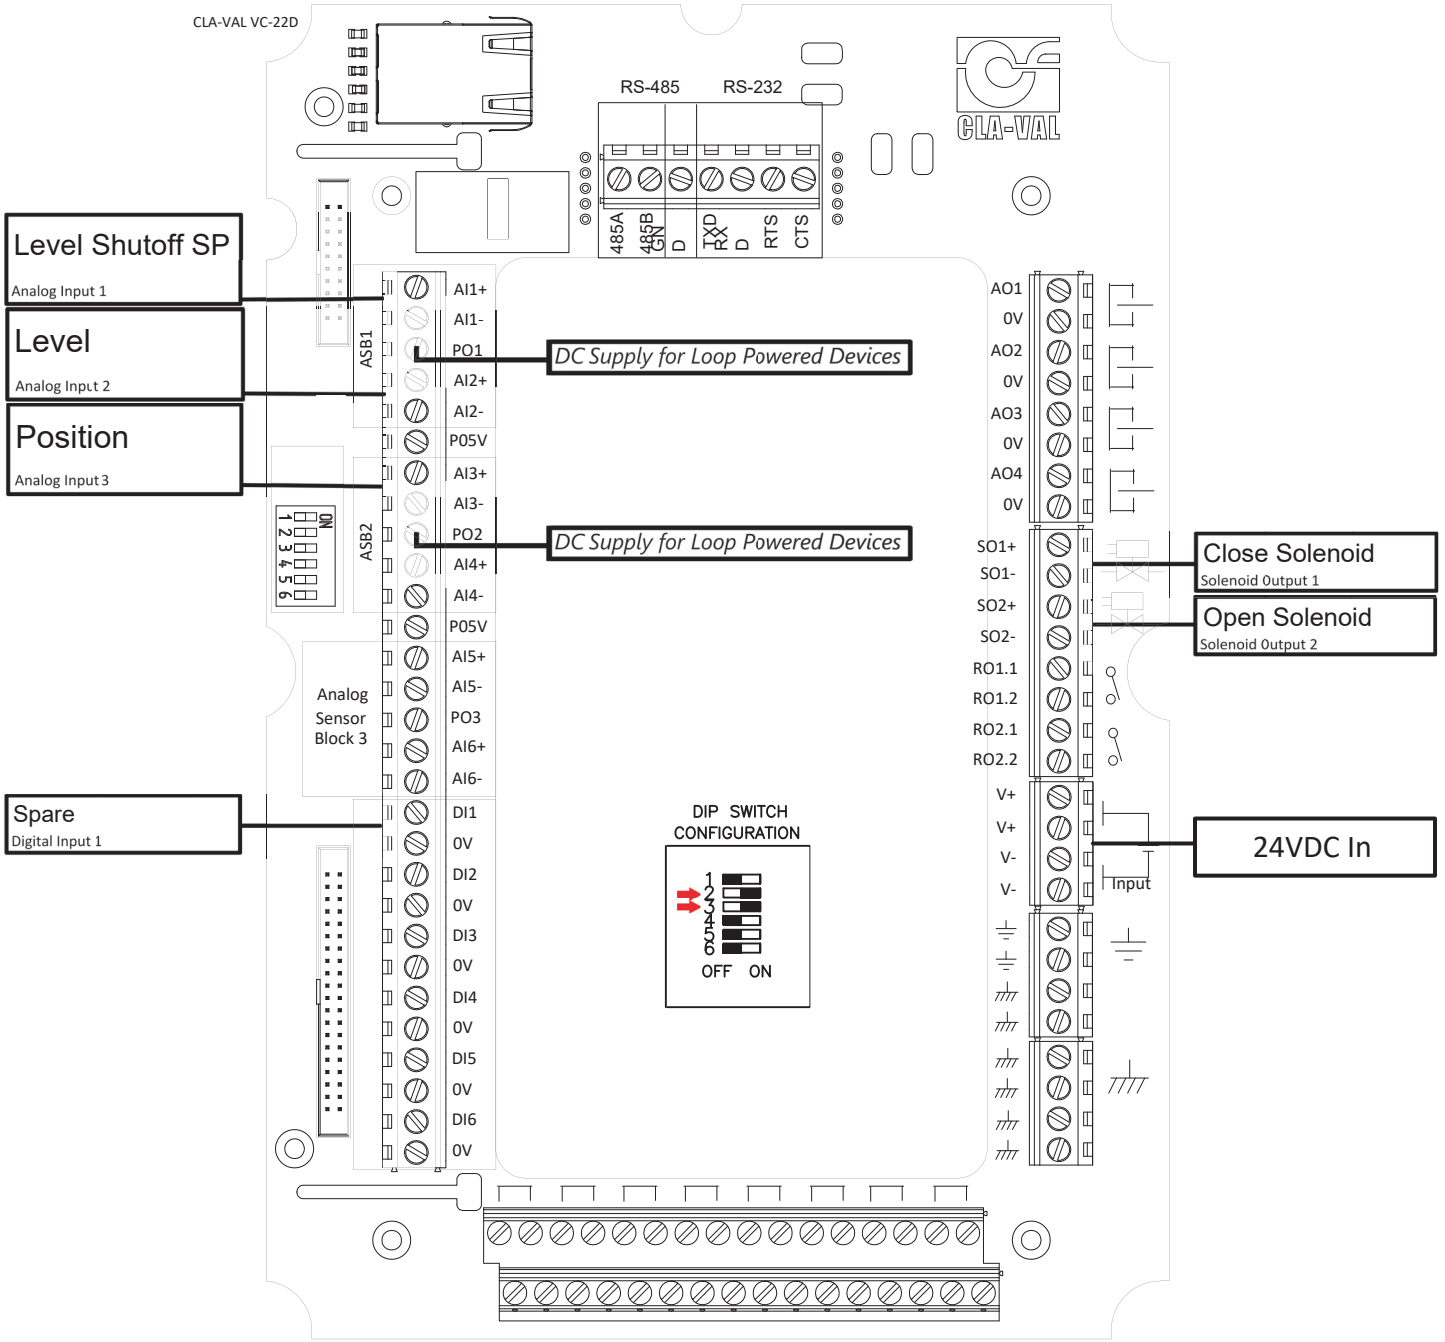

<input type="checkbox"/> GSM/GPRS	<input checked="" type="checkbox"/> Modbus TCP/IP	<input type="checkbox"/> Modbus RTU (RS485/RS232)	Note: See ModBus specification page for register mapping and implementation. Refer to manual for more details.
-----------------------------------	---	---	---

***Control Logic** (Please specify all control logic using sketches, diagrams, etc. Attach additional sheets if necessary)

This ValvApp provides standard level altitude control. If the level is above a high setpoint, the valve goes full closed. If the level is below the high setpoint, the valve allows flow into the tank. The position is directly proportional to the difference between current level and high setpoint. A maximum position setpoint has been included which can be adjusted in the field to prevent the position from exceeding a certain value regardless of how empty the tank is. A minimum position setpoint has been included which can be adjusted in the field to prevent the position from getting extremely small as the level approaches the high setpoint.

DI1 has been added into this program, even though they are currently not used for anything. This serves as a spare IO point so additional functionality can be added in the field by landing signal cables on this IO point and configuring actions in the VC-22D.

* This is only to give an idea of where wires will be landed. Does not account for number of wires and Loop or Field powered. Please refer to **Electrical Wiring** section of VC-22D IOM for help wiring loop or field powered devices.

Cla-Val VC-22D Modbus Addresses

Project Name:

N/A

Date:

Modbus	Input	Description	Data Type	Access	I/O Mapping	Comments
